Knight BSR Servers & How to move files

- Your personal directory, no one else can see files
- BSR shared drive
- Remote Desktop to use Windows
- Your personal directory, no one else can see files
- Home directory for bsrlinux and Rstudio server, also exacloud
- ssh bsrlinux
- To get back to home: cd ~/
- Can store small files/projects here
- Store personal R packages here,
 i.e. ~/Rlib

- BSR shared drive
- Larger files/projects here
- ssh bsrlinux
- cd /home/groups/bsrlinux
- chmod 775 (to make files readable/writable by BSR)

Mount S: drive on your computer, drag/drop files to copy to remote S:

drag/drop files to copy to remote S:
directories

Mount S drive or Remote desktop into knightbsr Windows, then Filezilla or Cyberduck to SFTP copy from S: to remote bsrlinux

ssh bsrlinux, use unix commands to move (mv) or copy (cp) files; or, use Filezilla/Cyberduck to drag/drop files between folders/directories

Mount S drive or Remote desktop in to knightbsr Windows, then Filezilla or Cyberduck to SFTP transfer from computer to remote bsrlinux
